
NEW PRODUCT ANNOUNCEMENT

To: Wholesale Customers
Date: February 15, 2010
Subject: New Option – Cast Stainless Steel Strainers

Sioux Chief's newest addition to our Drainage offering: Stainless Steel floor drain strainers and cleanout covers are now in stock and ready to ship. Along with our all-stainless Finish Line models, and large-capacity floor drains, we hope to continue building an offering that will help you to expand into new applications with our line.

These new strainers and covers are made from cast Type 304 stainless steel. Stainless steel drainage fixtures are typically installed in areas where the important factors to consider are 1) Corrosion, 2) Sanitation/Hygiene, or 3) Appearance. Stainless steel's superior corrosion resistance makes it suitable for applications where harsh fluids may be present, such as in breweries, chemical/textile plants, dairies, or laboratories. Stainless steel also provides a more sanitary surface than other materials, making it a common choice for commercial / restaurant kitchens, health care facilities, or food processing plants. Finally, the clean, durable, soft-silver appearance of our "shot-blast" finish is perfect for areas where aesthetics are important.

Stainless steel strainers/covers are available on most of our popular items that are currently available with nickel-bronze, see attached sheet for complete list of items. Basically, to order the stainless steel option you should replace the **N** in the item number with an **S**. (i.e. 821-200PSQ, 832-4DHSR, 834-3DSQ, 863-43SR, 842-3LSR, etc.) The list price for an item with a stainless steel strainer/cover will be \$10.00 higher than the comparable nickel-bronze item.

If you have any questions, please contact your Customer Service Department or your local Sioux Chief Representative any time.

Sincerely,

Wade Long
